

Important Steps in Building Resiliency

Definition

Resilience is the ability to overcome adversity. Resilience is possible at any age. Anyone can become more resilient at any stage of life, but it's easiest to build resilience in early childhood. We are all born with the capacity to be resilient. It is a skill that is built overtime and is like a muscle we must exercise.

Feeling safe, connected and supported by a caregiver provides a child with a foundation for building resilience. A caregiver can include a parent, teacher, coach, pastor or another safe, stable, nurturing adult in a child's life.

Building Resilience

Resilience can be built by improving skills to work through challenges. The resilience of an individual depends on their relationships and community. It is the systems around us that influence the ability of both children and adults to be resilient.

Why It Matters

It is never too late to build resilience. Developing age-appropriate, healthy activities can increase the chance that an individual will better cope with stress. For example, regular physical activity, breathing techniques, and meditation can strengthen resiliency. Adults with these skills model healthy behaviors for children, thus promoting resilience for the next generation.
